ADDRESS: Astha Twin City, Telco,
Jamshedpur - 831004

ACADEMIC PROFILE

Data Analysis: Python, SQL, Excel
Visualization: Power BI, Tableau
Languages: C, C++, HTML5, Javascript
Tools: MS Office, Microsoft Automate

CERTIFICATIONS

KPMG Data Analytics Consulting
Virtual Internship - Forge
Power BI by Pwc – Forge
TATA Data Visualisation: Empowering
Business with Effective Insights –
Forge
Bloomberg Market Concepts (BMC)
certification - Ongoing

LANGUAGES

English, Hindi, Telugu

HOBBIES AND INTERESTS

Pool / Billiards
Drawing and Painting
Gaming

Shrivatsa Gorti

PGDM – 25-27

Internship pre WeSchool

05 Months

Healthium Medtech Limited (Business Analyst Intern)

March 2023 – August 2023

- Automated manual processes of extracting data from SAP-HANA using python, excel and SQL, reducing 70% of the time in data gathering.
- Created real time updating Excel and Power BI Dashboard to assist in making powerful data driven decisions.
- Automated the process of mailing important mails and dashboards to all concerned heads using Microsoft Automate, saving 60 minutes daily.

Projects WeSchool

Project Kavach: Decentralized Identity Solution (RBI Problem Statement)

- Designed **Project Kavach** to address an **RBI problem statement**, utilizing **cryptographic tokenization** for secure, decentralized identity management.
- Automated **KYC processes** to mitigate compliance risks and reduce regulatory costs, ensuring enhanced data privacy and security.

Touchless Gesture-Controlled SQL Interface (Tata Motors Case Study)

- Engineered a **computer vision-based HMI** using **MediaPipe** and **Python** to enable touchless data entry, solving the "gloved hand" bottleneck in heavy manufacturing.
- Implemented automated **FIFO logic and SQL querying** to reduce digital twin latency and optimize **Order-to-Delivery (OTD)** metrics.

Automatic License Plate Recognition with OCR

- Developed an end-to-end ALPR system** using image processing and Optical Character Recognition (OCR) to automatically detect and read vehicle license plates from images/video streams.
- Implemented plate localization using techniques such as **edge detection** and **contour analysis (with Open CV)** to accurately isolate license plate regions under varying lighting and angle conditions.
- Integrated OCR engine (EasyOCR)** to achieve high recognition accuracy for alphanumeric plate characters.
- Deployed the model in a real-time application environment** using Streamlit and Python, demonstrating feasibility for traffic monitoring or automated toll collection.

Hand-drawn Alphanumeric Recognition using Deep Learning

- Designed a child-friendly recognition system** using **Python, Pandas, and NumPy** to evaluate how kids draw letters and numbers, focusing on accuracy, ease of use, and engagement.
- Created interactive dashboards with Streamlit and Matplotlib** to visualize recognition performance and learning progress.
- Assessed user feedback and system behavior**, translating technical results into actionable recommendations for improving model reliability and enhancing the learning experience for children.

Responsibilities and Achievements (Academic, Competitions, Others)

- Art Club Vice President at Bennett University**
- 5-Star in Python – HackerRank**
- 3-Star – CodeChef**
-
